

What's in the shots? Part 1 Dr David Nixon and Dr Ana Mihalcea

In search of the truth down the microscope

What's in the shots?

Independent Testing of Vials by 26+ Teams Worldwide*

- RNA sequenced from some vials – RNA not conforming to label
- DNA and protein impurities detected in massive quantities
- Different heavy and rare metals of unknown origin or purpose:
 - Caesium, barium, cobalt, iron, chromium, titanium, cerium, gadolinium, aluminum, silicon, sulfur, thulium, antimony (Moderna).
- Large structures: blobs, particles, crystals, flat square shapes, fibers, ribbons, assembly and movement visible immediately from frozen state
- Different forms of graphene possible
- Leftover magnetic beads – remember fridge magnets sticking to people?
